

1. Have you had any experience with computer hardware, such as replacing hard drives, video cards or upgrading a computer in any manner?

I've helped friends and past employers configure simple pc setups however that's as much hardware knowledge as i have.

2. Which types of computers and associated operating systems have you used? i.e. OS/X, Linux, Windows, DOS, etc.

I own a MacBook Pro however I also have windows on my laptop and have experience using both operating systems.

3. Which type of production software do you have experience with (i.e. word processors, spreadsheet software, presentation software, data base software)? In what context have you used any of this software?

I used to work as an aerospace inspector/technician So I've used all of this software. For example as a part would come off the NIKON automated laser its data would then be uploaded to excel and configured into a thermodynamic map that measured said part; I would then interpret the data and input it into a different program.

4. Do you have any experience programming or creating websites? Please explain. If yes, what programming language(s) have you used?

I've been exposed to many programming languages such as C, C++, Java, and X-code. I've created simple programs Youd would find in a class like this such as a calculator program but. Other than that my experience is purely in a professional environment without much personal direct influence as I was meant to troubleshoot the programs not create them.

5. Which mobile applications do you use regularly? Mention streaming audio/video, wikis, social media and cloud storage.

I'm not a social media user but do enjoy listening to music on apple music and watching movies on Netflix when I have the time.
